

MINICBLPAK

SoundGate®

## Purpose/Features

The SoundGate MINICBLPAK lets you connect any digital media player with an 1/8" (3.5mm) headphone output directly to your factory or aftermarket car radio or home audio/video system. The MINICBLPAK includes an RCA audio/video breakout cable and an 1/8" (3.5mm) stereo mini-jack cable, allowing audio and/or video output from your digital media playback device.

Simple-fi.™

## Installation

**Audio/Video Connections.** Connect the included A/V breakout cable (shown on reverse) to the headphone output on your digital media player. The 1/8" (3.5mm) end of this cable is specially designed with four conductors in order to carry both stereo audio and video signals simultaneously. Please note that not all digital media players support video output; check with your player's manufacturer to determine if your player supports video output from the headphone jack.

Plug the left and right (white and red) RCA audio connectors of the A/V breakout cable into the low-level audio inputs on your factory or aftermarket car radio, home stereo receiver, or any other device with RCA audio inputs. Plug the yellow RCA video connector into the video input on your factory or aftermarket DVD player, video receiver, home theatre system, television, or any other device with an RCA component video input.

Alternatively, you may connect the included 1/8" (3.5mm) stereo mini-jack cable to the headphone output on your digital media player. Connect the other end of this cable to the 1/8" (3.5mm) audio input on your factory or aftermarket car radio, home stereo receiver, or any other device with an 1/8" (3.5mm) audio input.

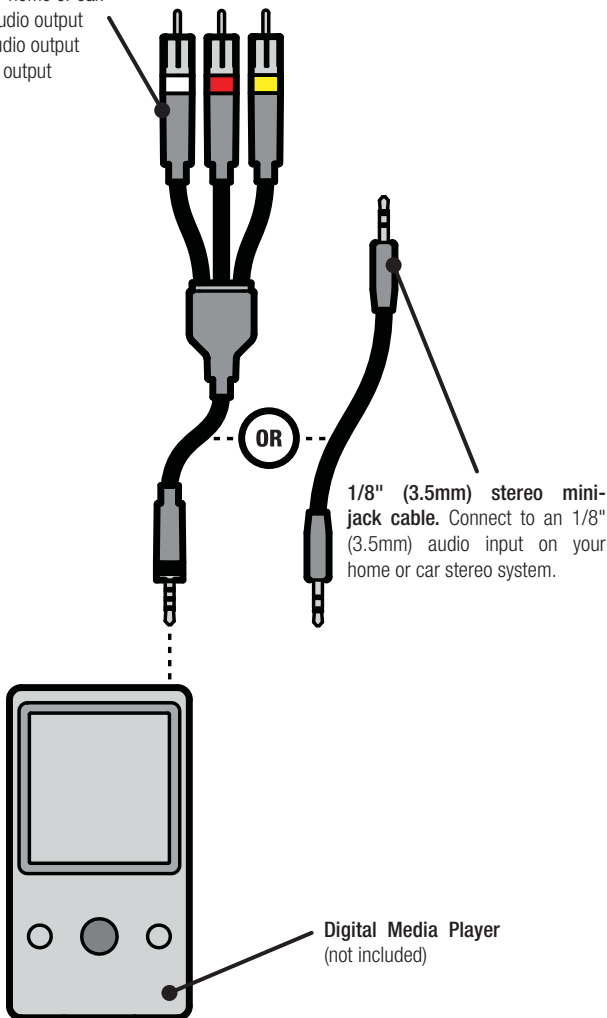

*To charge, deliver constant power, and provide remote capability to your digital media player while integrating seamlessly with your vehicle's factory or aftermarket radio, visit **[www.soundgate.com](http://www.soundgate.com)** or ask your local mobile electronics specialist about other SoundGate digital media player-integration products.*

**A/V RCA Breakout Cable.** Connect to RCA audio and video inputs on your stereo or video receiver in your home or car.

White = Left Audio output

Red = Right Audio output

Yellow = Video output

**1/8" (3.5mm) stereo mini-jack cable.** Connect to an 1/8" (3.5mm) audio input on your home or car stereo system.
